

CASE STUDY: ONLINE DATABASE ENTRY - SPA

COMPANY

Client is a Singapore Based. He has their own Database website for which data needs to be collected using Internet search and Upload to their database.

PROJECT

Client Approached E-Datatranc with the task of updating their Database for his business purpose. The Client invited E-Datatranc to work on this Project updating their Database by collecting the information using Internet search. Client has provided the Login ID's to access their database for collecting and uploaded the data extracted from the Internet. E-Datatranc Team of 8 Data Operators have successfully working on this Project from past two years. We have deployed a dedicated team with a Manager and Team lead for this Project.

THE PROCESS

E-Datatranc Team will collect all the required information from the Internet and then use the Login ID's provided by the Client to update the data into their database. Once each data is collected and updated then the final QC is done to verify the data in the database.

E-Datatranc makes daily deliveries in-time with Quality. We work 1000 entries per day into the database.

RESULTS

Client is Cheerful with the Quality and the way we communicate and deliver the work. E-Datatranc has become a premium vendor for this Client and interested to allot other Projects also.
